DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 2-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is unclear what applicant means by addition current measuring device, are these extra current sensors or just a name?

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by lijima et al (US Patent 6462491).

Although claims 2-7 have been rejected under 112, second paragraph for being unclear, the examiner has applied prior art against the subject matter of claims 2-7 as it is best understood.

Claims 1 and 2, lijima et al describe a motor control apparatus comprising current sensors 21u and 21v for measuring the current of two of the motor windings and a

Application/Control Number: 10/627,774 Page 3

Art Unit: 2837

control signal generating circuit 22 for estimating a state of the motor and controlling the current through the motor based on the measured current signals.

Claims 3, 4, 8, lijima et al describe in figure 27 a neutral point measuring device and a control signal processing circuit for determining the state of the motor based on signals from phase currents and the neutral current signal.

Claims 5, 6, and 9, lijima et al describes at least two of the three motor phases being independent.

Claims 7 and 10, lijima et al describes in figure 1 a control apparatus for a threephase motor.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rina I Duda whose telephone number is 571-272-2062.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Martin can be reached on 571-272-2107. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
